

COVER LETTER

Dear Hiring Manager,

From predictive maintenance across national power grids to anomaly detection in complex systems, I've built my career on solving high-impact problems with scalable, production-ready machine learning. When I learned about AIKO's mission to apply advanced ML to space health monitoring, I immediately recognized a rare alignment with both my experience and my passion for meaningful, frontier technology.

At Camlin Group, I've led time series modeling initiatives at scale, leveraging data from millions of nodes across the UK's electrical infrastructure to anticipate faults and optimize grid behavior. I designed and deployed end-to-end ML pipelines—integrating signal processing, anomaly classification, and forecasting—ensuring reliability for thousands of transformers and generators. These models, grounded in strong statistical foundations and reinforced by close collaboration with stakeholders, have directly influenced product strategy and client adoption.

With a PhD in Physics and over five years of hands-on experience, I bring a deep understanding of data, systems, and impact. I thrive in cross-functional teams, and my work is guided by curiosity, clarity, and the desire to engineer solutions that endure. I see AIKO not just as a company building for space—but as one building for the future—and I would be proud to contribute to that vision.

Thank you for your time and consideration. I look forward to the possibility of working together.

Best regards,
Leopoldo Cuspinera.
